

The go anywhere, anytime Mobile Personal Emergency Response Service (mPERS)

- Push button emergency alarm
- GPS location finder
- Automatic fall alert
- Motion and speed alerts
- Two-way audio
- 24/7 emergency monitoring centre
- Safe zones

As the leader in mobile location technology, Buddi has developed the latest state of the art GPS personal location alarm and fall detector.

Our newly designed and award winning 'buddi' enables independence for the individual, whilst offering their family and carers peace of mind and reassurance with support from our 24/7 alert monitoring service.

Who is it for?

- Anyone living alone
- Anyone at risk of a fall
- Someone whose family want to be a button press away
- Anyone who might need help at the press of a button
- Someone who might lose their way when out and about
- Anyone travelling alone

Buddi has been developing ground-breaking personal location technology for the health market since 2005, and is used by private individuals throughout the world.

Over 100 Local Authorities across the UK use buddi to great effect with real and significant savings achieved, as it enables an individual to retain their independence in their own home which reduces the need for additional care or delays the transition to residential care.

Current features:

Push button emergency alarm

At the touch of a button and alert will be sent to the 24/7 emergency monitoring centre. The UK based team will immediately be in contact through the buddi. If the wearer cannot be reached, the monitoring team will endeavour to alert other registered emergency contacts.

Automatic fall alert

The fall alert works fully automatically using a sensor call an accelerometer, so even if the wearer is incapacitated as a result of a fall, the alert is still raised. If the 24/7 Alarm Receiving Centre cannot make contact with the wearer they then endeavour to alert the other registered contacts. The clip will vibrate and flash blue when alerting. An alert can be cancelled by pressing the buttons.

Location finder

Using the latest satellite (GPS) technology, buddi can accurately locate the wearer - any time, any place, anywhere. So the wearer is not confined to their home or a small radius surrounding it.

24/7 emergency monitoring

As well as utilising the very latest technology, at Buddi we also recognise the crucial role people play in an emergency. We operate a fully staffed Alarm Receiving Centre in the UK where trained operators are on hand 24/7, 365 days of the year, to react to emergency alerts and inform registered contacts of emergencies so that they can provide assistance.

Safe places

Buddi can be set to alert emergency contacts if the wearer has gone somewhere they shouldn't. This is done by setting up safe and unsafe zones in your personal settings. This is quick and easy to set up and can be changed at any time.
